Other: ______________________________________________________________________

The nature and purpose of the treatment and procedures have been explained to me in general terms by Dr. ___________________. Alternative procedures or methods of treatment, if any, have also been explained to me, as have their advantages and disadvantages, the risks, consequences and probable effectiveness of each, as well as the prognosis if no treatment is provided. I am advised that though good results are expected, the possibility and nature of complications cannot be accurately anticipated and that, therefore, there can be no guarantee as expressed or implied either as to the result of the treatment or as to cure. I further authorize the doctor to perform other dental service(s) that in his/her judgment are advisable for my child or legal ward, with the exception of (if none so state): ___________________________________

I also authorize Dr. ___________________________to use photographs, radiographs, other diagnostic materials and treatment records for the purpose of teaching, research and scientific publications. Although their occurrence is not frequent, some risks and complications are known to be associated with dental or oral surgery procedures. The most common complications associated with pediatric dental treatment include nausea following the administration of topical fluoride and children biting and injuring their tongue or lip following the administration of local anesthesia. Less common complications include the risks of numbness, infection, swelling, prolonged bleeding, discoloration, hematoma, vomiting, allergic reactions, respiratory depression, heart problems, coma, or death. Other possible complications include swallowing or aspiration of a crown form, an extracted tooth or gauze packing; injury to the tongue and/or lips, damage to and possible loss of existing teeth and/or restorations (fillings), injury to nerves near the treatment site and fracture of a tooth root which may require additional surgery for its removal. For children with heart disease, the risk of sub acute bacterial endocarditis (heart infection) following dental treatment exists, therefore antibiotics may be prescribed before and following treatment, to minimize the risk. I further understand and accept that complications may require additional medical, dental or surgical treatment and may require hospitalization.
I hereby state that I have read and understand this consent form, that I have been given an opportunity to ask questions I might have, and that all questions about the procedure or procedures have been answered in satisfactory manner; and I understand further that I have the right to be provided with answers to questions which may arise during the course of my child’s treatment.

I further understand that I am free to withdraw my consent to treatment at any time. And that this consent will remain in effect until such time that I choose to terminate it.
